The comparability of Income and Expenditure Surveys 1995, 2000 and 2005/2006¹

DEREK YU

ABSTRACT

The Income and Expenditure Survey (IES) conducted by Statistics South Africa (Stats SA) between September 2005 and August 2006 was the third of its kind, after similar surveys in October 1995 and October 2000. The main purpose of the IES is to collect and provide information on income and expenditure patterns of a representative sample of households, so as to update the basket of goods and services required for the compilation of the Consumer Price Index (CPI). Nonetheless, these surveys have also become an important source of information for poverty and inequality analysis, mainly because of the absence of other detailed datasets containing income and expenditure data. There are, however, important reasons why these datasets cannot be unquestioningly compared. This paper attempts to show why.

The IESs conducted in 1995 and 2000 used the recall method. In the recall method, a single questionnaire was administered to a household at a selected dwelling unit in the sample, and the responding household was required to recall income and expenditure either during the month prior to the survey or for the twelve months prior to the survey. However, in the IES conducted in 2005-2006, the diary method was used extensively for the first time in order to record the household's daily acquisitions on a daily basis. In addition to the adoption of the diary method, the 2005-2006 IES is also different from the previous IESs in many aspects, such as sampling design, questionnaire structure, number of visits to the households, additions of some new expenditure items in the questionnaire, categorization of income and expenditure items, etc., and the focus of this paper is to look at how different the three IESs are, so as to assist researchers and policy makers when they try to analyze the IES data.

The comparability of Income and Expenditure Surveys 1995, 2000 and 2005/2006

1. Introduction

The Income and Expenditure Survey (IES) conducted by Statistics South Africa (Stats SA) between September 2005 and August 2006 was the third of its kind, after similar surveys in October 1995 and October 2000². The main purpose of the IES is to collect and provide information on income and expenditure patterns of a representative sample of households, so as to update the basket of goods and services required for the compilation of the Consumer Price Index (CPI). Nonetheless, these surveys have also become an important source of information for poverty and inequality analysis, mainly because of the absence of other detailed datasets containing income and expenditure data³.

The IESs conducted in 1995 and 2000 used the recall method. In the recall method, a single questionnaire was administered to a household at a selected dwelling unit in the sample, and the responding household was required to recall income and expenditure either during the month prior to the survey or for the twelve months prior to the survey. However, in the IES conducted in 2005-2006, the diary method was used extensively for the first time in order to record the household's daily acquisitions on a daily basis. In addition to the adoption of the diary method, the 2005-2006 IES is also different from the previous IESs in many aspects, such as sampling design, questionnaire structure, number of visits to the households, additions of some new expenditure items in the questionnaire, categorization of income and expenditure items, etc., and the focus of this paper is to look at how different the three IESs are, so as to assist researchers and policy makers when they try to analyze the IES data.

Section 2 focuses on the sampling design, sampling methodology and sample size in each survey, while the structure of the questionnaire and the use of the diary method are discussed in Section 3. Finally, Section 4 looks at the derivation of total household income, consumption and expenditure in each survey. For the remainder of the paper, the three IESs will be referred to as IES1995, IES2000, and IES2005/2006 respectively.

² These three surveys are countrywide surveys, covering metropolitan, urban and rural areas. Thus, they are not comparable with their predecessors (e.g., the 1985 Income and Expenditure Survey), since they only covered a more limited sub-set of households in metropolitan areas of the country.

³ Although the Census, October Household Survey (OHS), Labour Force Survey (LFS) and General Household Survey (GHS) conducted by Stats SA ask questions on household income and/or expenditure, they might not be suitable for poverty and inequality analysis. In Census 1996, more than 6.5% of households staying in normal dwellings (i.e., households that did not stay in institutions like hotels, student hostels, etc. at the time of the survey) did not specify household income and about 14.0% of households reported zero income. In Census 2001, more than 23.5% of households staying in normal dwellings reported zero income. Therefore, the Census data could result in an extremely high poverty rate. Ardington *et al.* (2005) tried to solve this problem by using a sequential regression multiple imputation (SRMI) approach to impute missing income values for the Census 2001 income data. Next, they assessed the influence of households with zero income values by setting them to missing before the SRMI process was re-done. This resulted in a slightly lower poverty headcount and Gini coefficient. Looking at the other survey data, the OHSs, LFSs and GHSs only ask the respondents to report income from the main job only, but there is a question on monthly total household expenditure. However, the question only provides 8 expenditure categories, and almost 70% of all households fall in the first three groups (i.e. R0 – R399, R400 – R799, R800 – R1199) in all surveys, suggesting that the expenditure categories are rather uninformative in their present state, and might not be suitable for measuring poverty and inequality accurately. However, the IES is also a problematic source of data for poverty and inequality analysis, as will be discussed in greater detail in Section 4.

2. Sampling design, sampling methodology and sample size

Table 1 presents the general information on the three IESs, such as the sample size, sampling frame, linkages with other surveys, survey period, number of questionnaires, number of visits per household by the fieldworkers, as well as the methodology to capture income and expenditure data. Some of them will be discussed in greater detail in this section.

In IES1995, information was obtained from 29 582 households⁴, with most of them being linked to the 1995 October Household Survey (OHS1995)⁵. In total, 2 000 enumerator areas (EAs) were drawn for the sample, and ten households were visited in each EA. The sample was stratified by race, province, urban and rural area. In addition, Census 1991 was used as a frame for drawing the sample, including estimates of the size of the population in the formerly independent TBVC (Transkei-Bophuthatswana-Venda-Ciskei) states⁶. The survey took place in October 1995, and data collection consisted of an extensive interview using a pre-coded main questionnaire. Note that only a maximum number of ten members per household were allowed to take part in the survey, and only a maximum number of five members per household (household head, his/her spouse and any other three members) were allowed to answer the questions in the income section.

In IES2000, Census 1996 was used for drawing the sample. Information was obtained from 26 263 households, and most of these households were linked to the September 2000 Labour Force Survey (LFS2000Sept)⁷. Altogether, 3 000 primary sampling units (PSUs) were drawn for the sample, and explicit stratification of the PSUs was done by province and area type. Within each explicit stratum, the PSUs were implicitly stratified by District Council (DC) and Magisterial District (MD). Next, a systematic sample of about ten dwelling units was drawn from each PSU. The survey took place in October 2000, and as in IES1995, data collection in IES2000 consisted of an extensive interview using a pre-coded main questionnaire.

In IES2005/2006, a newly designed sample consisting of approximately 3 000 PSUs, based on Census 2001 enumeration areas, was used as the sampling frame. These 3 000 PSUs were representatively divided into four quarterly allocations of 750 each. Within each quarterly allocation, a random sample of 250 PSUs was selected every month. Next, eight dwelling units were selected from each of the sampled PSUs for fieldwork. The aim of this process was to ensure that the sample was evenly spread over the twelve months, while it remained nationally representative in each quarter. In total, 25 192 households were covered during the twelve months of data collection, but 4 048 of them were rejected later and excluded from the final data for numerous reasons, which will be discussed in Section 3. In other words, the final sample size in IES2005/2006 was 21 144 households.

The IES2005/2006 survey was conducted over a period of one year, from September 2005 to August 2006, with sampled households participating for one month and new subsamples of households starting every month. Data collection consisted of an extensive interview using a pre-coded main questionnaire, which was split and conducted on five separate visits during the survey month. Besides, the household was required to record all its acquisitions relating to the

⁴ In all three IESs, a household is taken to include all people who lived together for at least 4 days a week at the time of the survey, and babies were included.

⁵ Of the 29 582 households interviewed in IES1995, 28 585 households also took part in OHS1995.

⁶ In fact, the people from the TBVC states were also included as part of the sample in IES2000 and IES2005/2006.

⁷ Of the 26 263 households interviewed in IES2000, 26 226 households also took part in LFS2000Sept.

survey month in diaries. A separate diary was used for each of the four weeks of the survey month, and the diary was collected on a weekly basis.

Table 1 General information on the three IESs

	IES1995	IES2000	IES2005/2006
Census used as a frame for drawing the sample for IES	Census 1991	Census 1996	Census 2001
Linkage with other surveys, if any	OHS1995	LFS2000 September	None
Questionnaires	One main questionnaire	One main questionnaire	One main questionnaire + Four weekly diaries
Methodology to capture data	Recall: Income and expenditure on non-durable items, semi-durable items, durable items and services	Recall: Income and expenditure on non-durable items, semi-durable items, durable items and services	Recall: Income and expenditure on semi-durable items, durable items and services Diary: Expenditure on non-durable items, semi-durable items and durable items
Number of visits per household	One	One	Minimum: Six [#] Maximum: Nine [#]
Survey period	Oct 1995	Oct 2000	Sep 2005 – Aug 2006
Sample size (Number of households)	29 582	26 263	21 144
Sample size in each group (IES2005/2006 only)	N/A	N/A	Group 1: 5 253 • Sep 2005: 1 796 • Oct 2005: 1 729 • Nov 2005: 1 728 Group 2: 5 230 • Dec 2005: 1 786 • Jan 2006: 1 809 • Feb 2006: 1 635 Group 3: 5 356 • Mar 2006: 1 900 • Apr 2006: 1 717 • May 2006: 1 739 Group 4: 5 305 • Jun 2006: 1 785 • Jul 2006: 1 841 • Aug 2006: 1 679
Classification of expenditure items	Standard Trade Classification	Standard Trade Classification	Classification of Individual Consumption According to Purpose (COICOP)
Others things to take note of	Only a maximum number of 10 members per household could take part in the survey		

[#] If the household only completed one weekly diary, then the number of visits by the fieldworkers would be six (i.e., five visits to ask questions from the main questionnaire and one visit to collect the weekly diary). However, if the household completed all four weekly diaries, then the number of visits by the fieldworkers would be nine.

3. The questionnaire structure

3.1 IES1995 and IES2000

The IES1995 and IES2000 questionnaire structures were exactly the same, as there was only one main questionnaire that asked questions on both income and expenditure.

Table 2 below shows the twenty-one main expenditure categories on the questionnaire. In the expenditure section, each household was asked to declare the expenditure during the month prior to the survey for some items and the expenditure for the twelve months prior to the survey for other items. The former was multiplied by twelve before they were converted into annual figures. The only exception was the items under reading matter and stationery (i.e., category 17), as the household was given the options to declare this expenditure on a weekly, monthly or annual basis. The weekly expenditure and monthly expenditure amounts were multiplied by fifty-two and twelve respectively so as to become annualized figures. Finally, the sum of the expenditure on all items from the first twenty categories (i.e., category 21 – debt – was excluded) was equal to the total household annual expenditure.

Table 2 Categorization of expenditure items, IES1995 and IES2000

Expenditure category / sub-category	Weekly/Monthly/Annual
(1) Housing <ul style="list-style-type: none"> • Regular housing cost • Occasional housing cost 	Monthly Annual
(2) Domestic workers <ul style="list-style-type: none"> • Domestic workers 	Monthly
(3) Food <ul style="list-style-type: none"> • Cereal • Meat • Fish and other seafood • Butter, fats, oils and margarine • Milk, milk substitutes, cheese and eggs • Vegetables • Fruit and nuts • Sugar, sugar products and sweeteners • Syrup, jam and related products • Coffee, tea and cocoa • Other food products • Meals/Snacks purchased/consumed away from home • Baby food 	Monthly Monthly Monthly Monthly Monthly Monthly Monthly Monthly Monthly Monthly Monthly Monthly Monthly Monthly Monthly
(5) Beverages <ul style="list-style-type: none"> • Non-alcoholic beverages consumed away from home • Non-alcoholic beverages consumed at home • Alcoholic drinks consumed away from home • Alcoholic drinks consumed at home 	Monthly Monthly Monthly Monthly
(6) Cigarettes, cigars, tobacco, etc. and smokers' requisites <ul style="list-style-type: none"> • Cigarettes, cigars, tobacco, etc. and smokers' requisites 	Monthly
(7) Personal care <ul style="list-style-type: none"> • Personal care 	Monthly

Table 2 Continued

Expenditure category / sub-category	Weekly/Monthly/Annual
(7) Other household consumer goods	
• Other household consumer goods	Monthly
(8) Household services	
• Household services	Monthly
(9) Household fuel	
• Household fuel	Monthly
(10) Clothing and footwear	
• Clothing	Annual
• Footwear	Annual
• Made-up clothing	Annual
(11) Furniture/Equipment	
• Furniture, fixtures and floor coverings	Annual
• Household textiles	Annual
• Appliances	Annual
• Other household equipment	Annual
(12) Health services	
• Medical cost of members of medical aid	Annual
• Medical cost of non-members of medical aid	Annual
(13) Transport	
• Cost of private transport purchased	Annual
• Running costs of private transport	Annual
• Cost of public and hired transport for work/school purpose	Annual
• Cost of public and hired transport for holiday	Annual
(14) Computer and telecommunication equipment	
• Computer and telecommunication equipment	Annual
(15) Communication for household purposes	
• Communication for household purposes	Annual
(16) Education	
• Educational expenditure borne by households	Annual
• Educational expenditure covered by grants	Annual
(17) Reading matter and stationery	
• Reading matter and stationery	Weekly or Monthly or Annual
(18) Recreation, entertainment and sports	
• Instruments, equipment and accessories	Annual
• Other goods for recreation/entertainment/sports	Annual
• Licenses, rental and other service charges	Annual
(19) Miscellaneous expenditure	
• Jewellery, handbags, sunglasses	Annual
• Membership fees, remittances, etc.	Annual
• Income tax (PAYE/SITE + other payments – refunds received)	Annual
• Finance and insurance	Annual
• Other expenditure (gambling, funeral, legal fees, etc.)	Annual
• Net loss	Annual
(20) Expenditure on own harvest/livestock	
• Produce	Annual
• Livestock	Annual
• Input cost	Annual
(21) Debt	
• Debt	Outstanding amounts due/owed

A few expenditure items were asked for the first time in IES2000, for example, expenditure on pre-cooked frozen meats, prepaid salads, and petrol/diesel for non-transport-related household use. In contrast, expenditure on a few items that were asked in IES1995 were dropped in IES2000, for example, expenditure on towels and face cloths, insurance premiums paid on accident policies, and expenditure on dry cleaning services. However, the expenditure on these items was quite small; thus it will only have negligible influence on composition of total household expenditure between the two surveys.

With regard to the total household annual income, each person in the household was required to declare his annual regular income and irregular income from different sources, as shown in Tables 3. However, as mentioned in Section 2, only a maximum number of five members per household (household head, his/her spouse and any other three members) were allowed to answer the questions in the income section in IES1995. The sum of the personal regular income and irregular income of all members from the household equals the total household annual income.

Table 3 Categorization of income items, IES1995 and IES2000

Regular income	
(1)	Salaries and wages <ul style="list-style-type: none"> • Salaries and wages from normal hours worked • Bonuses and income from overtime • Commission and director's fees • Part-time work and cash allowances in respect of transport, housing and clothing
(2)	Net profit from business/professional practice/farming on a full-time or part-time basis
(3)	Net income from letting of fixed property
(4)	Royalties
(5)	Interest received on savings/deposits/etc.
(6)	Dividends received on shares other than building society shares
(7)	Receipts from pension/social welfare grants/annuity funds <ul style="list-style-type: none"> • Pension from employment before retirement • Annuity and similar recurring receipts resulting from own investment • Old-age and war pensions • Disability grants • Family and other allowances • Income from Workmen's Compensation, Unemployment Insurance Fund and similar funds
(8)	Alimony, maintenance and similar allowances from family members living elsewhere
(9)	Regular allowances received from family members living elsewhere
Irregular income	
(1)	Net income from hobbies, side-lines and part-time activities
(2)	Income derived from sale of: <ul style="list-style-type: none"> • Motor vehicles • Fixed property • All other personal property and second-hand goods
(3)	Payments received from borders and other members of the household
(4)	Value of goods and services received by virtue of your occupation and shown as expenditure in the questionnaire <ul style="list-style-type: none"> • Housing (value of subsidies, reduced interest rates and rent, etc.) • Transport (value of company transport for private use, reduced air and train fares, etc.) • Pension, provident, medical and annuity funds • Other

Table 3 Continued

Irregular income	
(5)	Gratuities and other lump-sum payments <ul style="list-style-type: none"> • Lump sum resulting from your own employment before retirement • Endowment policies and other similar lump sums • Lump sums received from the Workmen's Compensation, unemployment insurance, etc. • Life insurance and inheritances received
(6)	Claims <ul style="list-style-type: none"> • Funeral funds, including funds' contributions to funeral expenses • In respect of damage to fixed property • In respect to road traffic collisions • Other gratuities
(7)	Stokvel
(8)	Other income <ul style="list-style-type: none"> • Net withdrawals from savings (i.e., total withdrawals minus total deposits) • Non-refundable bursaries from all sources • Benefits, donations and gifts received from private persons, welfare funds, clubs, government, etc. • Cash (including bonuses from buying associations) • Value of food received • Value of housing • Value of clothing • Value of other benefits, donations, gifts
(9)	Lobola/Dowry received
(10)	All other income (e.g., from gambling, lotto winnings)
(11)	Income not elsewhere specified

3.2 IES2005/2006

The diary method was introduced for the first time in IES2005/2006⁸, and the respondents needed to fill in the main questionnaire as well as four weekly diaries. As far as the main questionnaire is concerned, it was divided into five parts (Table 5). The fieldworkers visited each household five times and asked the household members to answer questions from each part in each visit so as to avoid interviewee fatigue, which might have happened in the previous IESs when the households were required to answer all questions in a single visit by the fieldworkers.

Table 4 Possible pros and cons of using the diary method

Pros	Cons
<ul style="list-style-type: none"> – Significant over-reporting of consumption or expenditure is less likely to happen – Acquisitions are recorded as they happen or close to that time, and hence the diary is less likely to suffer from problems of recall bias because short-term memory is more heavily relied upon – Households may enjoy the 'novelty' of filling out diaries – Households are allowed to answer questions when it most suits them 	<ul style="list-style-type: none"> – Significant under-reporting of consumption or expenditure is more likely to happen – Fatigue: as the diary period lengthens, participants become tired of keeping records and/or become less thorough in their reporting – Missing or unclear data might be difficult to resolve – A costly approach, not only due to the sheer volume of data that needs to be collected and analyzed, but also due to the time required to train diary keepers to maintain their support – Less appropriate where literacy levels are low (but this problem could be reduced by using a pictorial diary)

Source: Ahmed *et al.* 2006 & Wiseman 2005.

⁸ Table 4 above summarizes the possible pros and cons of using the diary method.

The main questionnaire asked the respondents to declare regular and irregular income as well as expenditure on semi-durable items, durable items and services. On the other hand, the respondents were asked to declare the income and expenditure either during the month prior to the survey month, during the eleven months prior to the survey month, and/or during the past twelve months.

Table 5 The types of questions asked in each of the five interviews from the main questionnaire, IES2005/2006

<u>FIRST INTERVIEW</u>	
Section 1:	Particulars of each person in the household
Section 2:	Area of purchase of goods by this household
<u>SECOND INTERVIEW</u>	
Section 3:	Information regarding dwellings
Section 4:	Housing
Section 5:	Swimming pool and garden
Section 6:	Expenditure when away from home
Section 7:	Domestic workers
Section 8:	Input costs for home production
<u>THIRD INTERVIEW</u>	
Section 9:	Clothing and footwear
Section 10:	Household textiles
Section 11:	Furniture and equipment
Section 12:	Recreation, entertainment and sport
<u>FOURTH INTERVIEW</u>	
Section 13:	Education and training
Section 14:	Reading material and stationery
Section 15:	Health services and medical requisites
Section 16:	Transport
Section 17:	Computer and telecommunication equipment
<u>FIFTH INTERVIEW</u>	
Section 18:	Finance charges, income tax and investment
Section 19:	Particulars of income (Regular income and irregular income)

In addition to the main questionnaire, households were required to record their expenditures for four weeks in the form of four weekly diaries. The fieldworkers collected each diary on a weekly basis. Some households for various reasons such as fatigue, moving from selected dwelling units, etc., did not complete all four diaries. Stats SA decided that only households that completed the main questionnaire and at least two weekly diaries were accepted (Table 6). Missing acquisitions for households with two or three diaries were imputed.

The imputations were done as follows (Statistics South Africa, 2006):

- If a household had two completed diaries, expenditure from the two diaries was added together and the sum was divided by two. This average figure was then used twice to impute for the remaining two non-completed/missing diaries.
- If a household had three completed diaries, expenditure from the three diaries was added together and the sum was divided by three. This average figure was then used to impute for the remaining non-completed/missing diary.

Table 6 Inclusion of households for the final IES2005/2006 data

Description	Number of households	Decision
Completed all diaries but did not complete the main questionnaire	325	Rejected
Completed all diaries and main questionnaire	20 960	Accepted
Non-contact	199	Rejected
Refused	480	Rejected
Completed at least two diaries and main questionnaire	184	Accepted
No usable information	14	Rejected
Vacant dwelling	1 577	Rejected
Listing error	270	Rejected
Other	728	Rejected
Completed main questionnaire but only zero or one diary	455	Rejected
Total	25 192	

Source: Statistics South Africa, 2006.

Next, the annualized expenditure and income figures from both the main questionnaire and the weekly diaries were calculated using the method shown in Table 7.

Table 7 Derivation of the annualized income and expenditure figure, IES2005/2006

Type of data item	Reference period		Annualized figure
	[A]: Diary (Survey month)	[B]: Main questionnaire	
Non-durable items	1 month	-	$[A] \times 12$
Semi-durable items	1 month	11 months	$[A] + [B]$
Durable items	1 month	11 months	$[A] + [B]$
Services	-	1 or 12 months	[B] (if reference period is 1 month) $[B] \times 12$ (if reference period is 12 months)
Regular income	-	1 and 11 months [#]	Monthly figure + 11-month figure [#]
Irregular income	-	12 months	[B]

[#] In IES2005/2006, respondents were asked to declare income for the previous month and income for the 11 months prior to the survey month for all regular income items. These two figures were then added before the annualized figure was derived.

Finally, all annualized income and expenditure items from both the main questionnaire and the weekly diaries were re-categorized using the Classification of Individual Consumption According to Purpose (COICOP) method. COICOP is a reference classification published by the United Nations Statistics Division that divides the purpose of individual consumption expenditures incurred by three institutional sectors, namely households, non-profit institutions serving households and general government, and was adopted for the first time in South Africa in IES2005/2006⁹.

Table 8 shows that there are eleven main groups in the COICOP, and only the items from group 1 (i.e., CPI consumption) were included for the compilation of the CPI. Table A1.1 of Appendix I provides more detail by showing the income and expenditure items in each main group of the COICOP.

⁹ In IES2005/2006, only households were included in the sample (i.e., non-profit institutions serving households and general government did not take part in the survey).

Table 8 The main categories of the COICOP, IES2005/2006

Group 1: CPI Consumption (i.e., items included for the compilation of the CPI)	
(A)	Food and non-alcoholic beverages
	<ul style="list-style-type: none"> • Food <ul style="list-style-type: none"> ➤ Bread and cereals ➤ Meat ➤ Fish ➤ Milk, cheese and eggs ➤ Oils and fats ➤ Fruits ➤ Vegetables ➤ Sugar, jam, honey, chocolate and confectionery ➤ Food products not elsewhere classified • Non-alcoholic beverages <ul style="list-style-type: none"> ➤ Coffee, tea and cocoa ➤ Mineral waters, soft drinks, fruit and vegetable juices • Unclassified expenditure on food from the diary
(B)	Alcoholic beverages, tobacco and narcotics
	<ul style="list-style-type: none"> • Alcoholic beverages • Tobacco
(C)	Clothing and footwear
	<ul style="list-style-type: none"> • Clothing • Footwear
(D)	Housing, water, electricity, gas and other fuels
	<ul style="list-style-type: none"> • Actual rentals for housing • Imputed rentals for housing • Maintenance and repair of the dwelling • Water supply and miscellaneous services relating to the dwelling • Electricity, gas and other fuels
(E)	Furnishings, household equipment and routine maintenance of the house
	<ul style="list-style-type: none"> • Furniture and furnishings, carpets and other floor covering • Household textiles • Household appliances • Glassware, tableware and household utensils • Tools and equipment for house and garden • Goods and services for routine household maintenance
(F)	Health
	<ul style="list-style-type: none"> • Medical products, appliances and equipment • Out-patient services • Hospital services
(G)	Transport
	<ul style="list-style-type: none"> • Purchase of vehicles • Operation of personal transport equipment • Transport services • Operational values of other modes of transport
(H)	Communication
	<ul style="list-style-type: none"> • Postal services • Telephone and telefax equipment • Telephone and telefax services

Table 8 Continued

(I)	Recreation and culture
	<ul style="list-style-type: none"> • Audio-visual, photographic and information processing equipment • Other major durables for recreation and culture • Other recreational items and equipment, garden and pets • Recreational and cultural services • Newspapers, books and stationery • Package holidays
(J)	Education
	<ul style="list-style-type: none"> • Pre-primary and primary education • Secondary education • Tertiary education • Education not definable by level
(K)	Restaurants and hotels
	<ul style="list-style-type: none"> • Catering services • Accommodation services
(L)	Miscellaneous goods and services
	<ul style="list-style-type: none"> • Personal care • Personal effects • Social protection • Insurance • Financial services not elsewhere classified • Other services not elsewhere classified
(M)	Other unclassified expenditure
Group 2: In-kind consumption	
Group 3: Income	
Group 4: In-kind income	
Group 5: Savings	
Group 6: Taxes	
Group 7: Transfer to others	
Group 8: Debts	
Group 9: Loss	
Group 10: Not CPI consumption (i.e., items not included for the compilation of CPI)	
Group 11: Products not in income (i.e., income items that are not included in group 3)	

As far as the income section (i.e., group 3) is concerned, the items included in this group in IES2005/2006 are almost exactly the same as those included under the income section in IES1995 and IES2000, except that the following changes happened in the former:

- Two new items, 'tax refunds received' and 'imputed rent on owned dwelling 7% per year of value of dwelling', were included. The former was originally an expenditure item in IES1995 and IES2000 (Table 2). On the other hand, imputed rent, the estimated value of the use of owner-occupied dwellings, was asked for the first time in IES2005/2006. On the main questionnaire, the households that owned dwelling at the time of the survey were asked to declare the imputed rent¹⁰. Since Stats SA was worried that the respondents might have given inaccurate answers, industry experts were tasked with assessing rental yields based on the value of the property provided

¹⁰ The question was asked as follows: 'If you were to rent this dwelling, how much would you pay for it per month?'

- by the respondents, and this resulted in an annual rental value of 7% of the value of the property¹¹.
- The item ‘net withdrawals from savings’, which was included as in irregular income item in IES1995 and IES2000, was no longer included as in income item in IES2005/2006. In fact, it was included as a savings item (i.e., group 5) in the latter.
 - Three irregular income items – ‘value of goods and services received by virtue of occupation’, ‘non-refundable bursaries’, and ‘value of housing’ – were included as irregular income items in IES1995 and IES2000, but were excluded (from group 3) in IES2005/2006. Instead, these three items were included in the products not in income group (group 11). The same thing happened to the irregular income item ‘value of transport’, which was asked for the first time in IES2005/2006.

Looking at the expenditure items, in addition to the two imputed rent items mentioned above, expenditure on few items were also asked for the first time in IES2005/2006, such as the cost of other dwelling¹², and expenditure on alternative means of transport like horses and donkeys. With regard to the categorization of the expenditure items, it is obvious that the Standard Trade Classification used in IES1995 and IES2000 (i.e., the items from the first twenty expenditure categories were added to derive the total household annual expenditure) is not directly comparable with the COICOP method in IES2005/2006. In the latter, the expenditure items fell under group 1 (Consumption), group 2 (In-kind consumption), group 5 (Savings), group 6 (Taxes), group 7 (Transfers to others) and group 9 (Loss).

¹¹ The variable ‘Imputed rent 7% per year of value of dwelling’ was included both as an income item (under group 3: Income) and an expenditure item (under sub-group D: housing, water, electricity, gas and other fuels in group 1: Consumption). Besides, the variable ‘Imputed rent’ was included as an item under group 10: Not CPI consumption. Note that the imputed rent question was actually asked under the expenditure section of the main questionnaire (Section 4: Housing) in the second interview by the fieldworkers (Table 5).

¹² The inclusion of the three new housing expenditure items – imputed rent, imputed rent 7% per year of value of dwelling and cost of other dwelling in total household income or expenditure would have an impact on the results of the comparative analysis (on income, expenditure, poverty and inequality trends). This will be discussed in greater detail in Section 4.

4. Using the three surveys for comparative analysis

4.1 Total income, consumption and expenditure patterns

Since the COICOP is very different from the Standard Trade Classification in the previous IESs, in order for meaningful comparative analysis to be conducted, there are two options:

- Re-categorize the income and expenditure items in 1995 and 2000, using the 2005 COICOP structure
- Re-categorize the income and expenditure items in 2005 using the Standard Trade Classification.

However, even if the above exercise is done, one must still remember that some of the items in IES2005/2006 were obtained using a different method – the weekly diary. On the other hand, after the re-categorization of items was done, all nominal income and expenditure values were converted into 2000 prices using the South African Reserve Bank's monthly CPI series (KBP7032N), as shown in Table 9.

Table 9 Monthly CPI used to convert all nominal values into 2000 prices

Survey	Survey year and month	CPI
IES1995	1995 October	73.20
IES2000	2000 October	101.96
IES2005/2006	2005 September	129.25
	2005 October	129.64
	2005 November	129.88
	2005 December	130.32
	2006 January	130.56
	2006 February	130.91
	2006 March	131.18
	2006 April	131.40
	2006 May	132.30
	2006 June	133.52
	2006 July	134.44
	2006 August	135.70

Table 10 shows the total annual household income and expenditure in 2000 prices if one looks at all households in the sample. Note that the three new housing items – imputed rent, imputed rent 7% per year of dwelling, and the cost of other dwelling – were not included when the 2005/2006 total expenditure was calculated. Including these would give a misleading conclusion that the South African economy enjoyed a rapid increase of income between 2000 and 2005/2006¹³.

¹³ In 2000 prices, imputed rent, imputed rent 7% per year of value of dwelling and the cost of other dwelling amounted to R84 008 million, R66 927 million and R8 996 million respectively. The total expenditure on few other items also asked for the first time in IES2005/2006 (e.g., spending on alternative means of transport like horses and donkeys) was so small that they would have negligible influence on the total expenditure in 2005/2006, and thus these items were still included for the calculations in Table 10.

Table 10 shows that there was a serious decline of both income and expenditure between IES1995 and IES2000, followed by very rapid increase of both values in IES2005/2006. Looking at the expenditure in the twenty main categories, it is obvious that the transport expenditure increased abruptly in IES2005/2006¹⁴, complemented by the rapid decline of food expenditure¹⁵. In fact, it is quite unusual that the food expenditure declined across all three surveys (a slight decline in IES2000, followed by a relatively bigger decrease in IES2005/2006).

Table 10 Total household annual income and expenditure using Standard Trade Classification in all three surveys, 2000 prices (Rand million)

	IES1995		IES2000		IES2005/2006	
Total expenditure						
Housing	76 084	14.6%	78 656	17.1%	118 512 ^a	15.8%

Computer and telecommunication equipment	1 502	0.3%	3 071	0.7%	4 655	0.6%
Communication for household purposes	10 907	2.1%	9 613	2.1%	16 414	2.2%
Education	8 822	1.7%	13 160	2.9%	18 558	2.5%
Reading matter and stationery	2 298	0.4%	3 109	0.7%	2 678	0.4%
Recreation, entertainment and sports	6 457	1.2%	7 147	1.6%	15 258	2.0%
Miscellaneous expenditure	166 270	32.0%	110 123	24.0%	274 949	36.6%
Expenditure on own harvest/livestock	6 714	1.3%	9 123	2.0%	3 667	0.5%
Total household annual expenditure	519 549	100.0%	458 867	100.0%	751 153	100.0%
Total income						
Total household annual income	527 850		460 572		659 229^b	
Percentage change of total income and expenditure between two surveys						
	2000 vs. 1995		2005/2006 vs. 2000		2005/2006 vs. 1995	
Total household annual expenditure	-11.68%		63.70%		44.58%	
Total household annual income	-12.75%		43.13%		24.89%	

^a Imputed rent, imputed rent 7% per year of value of dwelling, and the cost of other dwelling were excluded.

^b Imputed rent 7% per year of value of dwelling was excluded.

¹⁴ It was found that the abrupt increase of transport spending in IES2005/2006 was mainly caused by the rapid increase in spending on the following items (COICOP code in brackets): Purchase of new motor cars, station wagons and mini-buses, excluding vehicles for business purposes (7111100), purchase of used motor cars, station wagons and mini-buses, excluding vehicles for business purposes (7112100), purchase of new bakkies (7111200), purchase of used bakkies (7112200), purchase of new four-wheel drive vehicles (7111300), purchase of used four-wheel drive vehicles (7112300), and motor car fuel (7221110).

¹⁵ It was found that the rapid decrease of food expenditure in IES2005/2006 was mainly caused by the relatively big decline of spending on the following items (COICOP code in brackets): White bread (1112101), brown bread (1112102), whole wheat bread (1112104), other bread loaves (1112105), mealie meal and maize flour (1116101), fresh full cream milk (1141101), fresh low fat milk (1142101), onions (1174101), and white sugar (1181101).

Next, Table 11 shows what would have happened to total income, consumption, savings, etc., if the COICOP structure was used in all three surveys, and the results showed that both total household CPI consumption (i.e., group 1) and total household income (i.e., group 3) declined between IES1995 and IES2000, before they increased again in IES2005/2006. Looking at the main categories of group 1, the food and non-alcoholic beverages kept declining throughout the years, while consumption on transport experienced an abrupt increase in IES2005/2006.

Table 11 Total household annual figures in each income / consumption category using COICOP in all three surveys, 2000 prices (Rand million)

Total CPI consumption	-11.45%	43.34%	26.92%	
Total income	10.82%	44.59%	28.94%	

^a Excluding imputed rent 7% per year of dwelling.

^b Excluding imputed rent per year of dwelling

^c Excluding the cost of other dwelling.

^d Excluding imputed rent.

Comparing the income, consumption and expenditure patterns discussed above with the national accounts' income patterns, the latter enjoyed a continuous increase between 1995 and 2005, as shown in Figure 1.

Figure 1 Total income, consumption and expenditure from IESs and total income from National Accounts

Source: Own calculations using IES1995, IES2000 and IES2005/2006 data and South African Reserve Bank Quarterly Bulletin.

4.2 Food spending

The continuous declining trend of food expenditure mentioned in Section 4.1 seems peculiar, since Stats SA's General Household Surveys (GHSs) show that there has been a continuous decline in the percentage of households experiencing adult hunger and child hunger problems, as shown in Figures 2 and 3.

Figure 2 Percentage of households with adults aged 18 years or above that experience adult hunger problem in the past twelve months prior to the survey, GHS2002 – GHS2006

Figure 3 Percentage of households with children aged 0-17years that experience child hunger problem in the past twelve months prior to the survey, GHS2002 – GHS2006

Stats SA (2008b: 27) argues that there are three possible reasons for this trend:

- Fatigue: Respondents might have felt fatigued in the last one or two weekly rounds of filling in a diary and hence under-reported their food expenditure.
- Loss of receipts (till slips): Respondents might “have found it difficult to keep track of all their grocery and to diligently record long lists of food items in their diaries, and in cases where till slips were lost or thrown away the fieldworkers would not have been able to check the diaries or complete them on the respondents’ behalf.” Therefore, the food expenditure could be under-reported.
- Telescopic effect under the recall method: the reliance on recall method in IES1995 and IES2000 might have resulted in a degree of over-reporting of food expenditure in these two surveys. High-frequency type food items might have been reported as recent purchases erroneously when the respondents relied on memory rather than on a diary, but the actual expenditure could have taken place earlier than imagined by the respondent.

4.3 Poverty trends

Table 12 presents the poverty headcount and Gini coefficient using the real per capita income variable and the lower-bound poverty line of R3 864 per capita per annum recently proposed by Stats SA¹⁶. The results show that the poverty headcount increased between 1995 and 2000¹⁷, before it declined in 2005/2006, regardless of whether the Standard Trade Classification or COICOP is used. However, the 2005/2006 poverty headcount is still slightly above the 1995 headcount. On the other hand, there was an evident increase of Gini coefficient between IES1995 and IES2000, while the IES2000 and IES2005 Gini coefficient values were very similar, regardless of the income categorization method used.

Table 12 Poverty headcount and Gini coefficient, using annual per capita income, 2000 prices

	Standard Trade Classification	COICOP
Poverty headcount (Poverty line: R3 864 per capita per annum)		
IES1995	43.8%	46.2%
IES2000	56.4%	57.2%
IES2005 (excluding imputed rent 7% per year of dwelling)	49.7%	50.4%
IES2005 (including imputed rent 7% per year of dwelling)	46.7%	47.3%
Gini coefficient		
IES1995	0.6551	0.6599
IES2000	0.7114	0.7090
IES2005 (excluding imputed rent 7% per year of dwelling)	0.7090	0.7146
IES2005 (including imputed rent 7% per year of dwelling)	0.7170	0.7160

¹⁶ The lower-bound poverty line proposed by Stats SA provides for essential food and non-food consumption, and amounts to R322 per capita per month in 2000 prices (i.e., $R322 \times 12 = R3\ 864$ per capita per annum). Stats SA also proposed an upper-bound poverty line, which provides for essential food and non-food consumption as well as non-essential non-food consumption. This upper-bound poverty line amounts to R593 per capita per month in 2000 prices (i.e., $R593 \times 12 = R7\ 116$ per capita per annum).

¹⁷ However, one must bear in mind the problem of the under-estimation of income and expenditure in IES2000, as mentioned earlier in this section.

5. Conclusion

This paper has discussed the differences amongst the three most recent IES surveys, including sampling design, sampling methodology, sample size, duration of the survey, number of questionnaire, the questionnaire structure, categorization of the income and expenditure items, as well as the issues one must consider when trying to conduct comparative analyses on income, consumption, expenditure, poverty and inequality trends using all three survey datasets.
